

E-Learning is Fun

Tutored learning, with explanations of the use of hardware and software, and tips on arranging individual study programs from a range of learning modules: this is the basis of successful online learning. The only prerequisite is the students' willingness to learn. Students are awarded credit points for each study section or module they have completed. After collecting the necessary amount of credit points, they have successfully completed the module or their course of study.

Avatars, or virtual personalities, read texts with their lip movements synchronized accordingly. They also refer the students to technical terms highlighted in the margin, which are explained elsewhere. After accessing these explanations, the students will be led directly back to where he left the lecture or video film.

The advantages of e-learning in a nutshell:

1. Practice-oriented approach: students are encouraged to organize their own education, taking into consideration knowledge and experience they have acquired previously
2. time-saving method
3. cost advantages
4. automatic updates
5. high success rate
6. flexibility as to where and when the students learn

E-LEARNING · GLOBAL

Education worldwide undergoes a dramatic change. In many countries, educational and economic systems are not in line anymore.

Since international networks of electronic systems became accessible for the first time, knowledge has been transferred more and more with the help of the computer. This has happened on a cross-border, i.e. global scale, like an open university, which updates itself continuously.

"Corporate Universities", i.e. special study programs for companies, are being realized with the help of customized curricula for further education. This is the start of a new, innovative business which will certainly be one of the fastest-growing industries of the 21st century.

With the support of **UNIRVM**, students will be able to start a successful career, making use of valuable qualifications which they have acquired through high-quality UNIRVM e-learning courses.
